Collaborative Short-Term Action to Advance America's Health

Agenda

- Welcome and Overview of Major Themes
- Remarks from Federal Leaders
- Mini Panel Discussions:
 - Reducing Burden of Respiratory Infections
 - Reducing Burden of OUD/SUD
- Panel Discussion:
 - Path to Improving US Health Through Public-Private Collaboration
- Closing Remarks and Next Steps

Collaborative Short-Term Action to Advance America's Health

Planning Group

Expert Members

- Bechara Choucair, Kaiser Permanente
- Dave Chokshi, NYU Grossman School of Medicine
- Karen DeSalvo, Google
- Carlos del Rio, Emory University
- Megan Ranney, Yale School of Public Health
- Anne Zink, Alaska Department of Health & Association of State and Territorial Officials
- Fred Cerise, Parkland Health & Hospital System
- Marc Harrison, General Catalyst

- Melissa Harvey, HCA
- Rhonda Medows, *formerly* Providence

NAM and DM Leadership

- Victor Dzau, National Academy of Medicine
- Mark McClellan, Duke-Margolis Center for Health Policy
- Michael McGinnis, National Academy of Medicine

Collaborative Short-Term Action to Advance America's Health

Health Policy

Overview of Collaborative

- We are focusing on opportunities now for collaborative steps to improve the nation's health
- This new Issue Brief summarizes
 - Foundational elements for progress
 - A set of feasible, meaningful action steps across health care, public health, and community supports to improve our nation's capacity to respond to two population health priorities

Short-Term Opportunities for Improving Population Health

1. Strengthening protections for individuals and communities from the complications and disruptions of respiratory infections
2. Preventing overdose deaths and other complications of opioid use disorder (OUD)

Areas with near-term opportunities for progress, through Federal policy supports that enable collaborative action at the local, state, and national level

Foundational Steps for Short-Term Progress

- These policy actions can enable progress across a range of public health challenges, including protection from respiratory illness and OUD complications:
 - Improving use of electronic data to inform public health threat awareness and action through systems standards and integration.
 - Leveraging health care payment and delivery reforms to increase health care capabilities to improve population health
 - Strengthening effective and accountable community health collaborations across public health, health systems, social services, and community organizations.
 - Helping trusted health care and community organizations provide timely and accurate information that individuals, families, businesses, and community organizations can use to make decisions about their health

Path to Improving US Health Through Public-Private Collaboration

- What synergies do you see between your current public-private collaboration and the further action steps discussed today?
- With the current challenges facing public health in America, including tight funding for public health agencies, how will these steps help make progress?
- Beyond respiratory viruses and OUD, what do you see as other top pressing population health priorities for action in the next 18 months – and how do the?
